

## Course III: Cybersecurity

Using the newest technological solutions comes with many benefits, but it also brings about certain security risks. How can you recognise these red flags and keep yourself safe online?

The Cybersecurity course allows you to understand how to safely navigate digital environments and protect yourself and your business from the threats.

At the end of this course, you will be able to:

-  Reflect on the **privacy risk caused by digital activities** and learn how to protect yourself against data and identity theft, cookies, profiling, and tracing.
-  Identify and **understand the implications of common hacking threats** — malware, phishing, social engineering, hardware failure, theft, or loss.
-  **Identify appropriate security measures** and position them along with the different activities of defence.
-  Define security objectives and **understand general security principles** as they relate to various online activities.
-  **Understand how common cryptography services work** and how they protect your everyday digital activities.
-  Understand the **basics of the emerging technologies evolution** and its impact on cybersecurity in general.
-  **Build a simple cyber-safety action plan** for yourself and your business.
